

# Tropical Slip & Slide Site Layout Information

- The Slip & Slide is a 37' x 9' x 9' tall inflatable. Please provide at least a 50' x 15' space with at least 15' of clearance from tree branches and other obstructions for the Slip & Slide. This will create an open space around the Slip & Slide for safety and to protect our equipment. We will not set up the bounce house under or near any electrical or telephone wires.
- Make sure there are no underground irrigation pipes and/or buried telephone cables or electric lines close to the perimeter of the Slip & Slide. We will use 18" stakes to secure the Slip & Slide. Sandbags are available as a substitute upon request.
- Clear the site of all sharp sticks, animal waste, large rocks and other large debris. If animal waste must be removed, please cover the spot to protect our equipment from residue. On hard surfaces like driveways or parking lots, please sweep the area clean.
- The Slip & Slide surface should be relatively level. No more than a 6" slope per 10'.
- A standard 110 outlet within 50 feet is required for operation. It is best that the outlet not be shared with other large equipment.
- The Slip & Slide requires a constant source of both power and water. Please plan to run extension cord and hose away from foot or any other type of traffic.
- Please be present at the time of delivery, your limited assistance may be needed to help set up. Make sure a clear path of at least 3 feet wide is available for delivery of the Slip & Slide. If curbs, steps or stairs need to be negotiated, we may require the renter's assistance for delivery.
