

step 1 : Set Up Straps

Find two trees or other objects that are approximately 10 ft apart or so. Take one of the straps and place around a tree. Put the small end through the large end and pull tight to hang off tree with. Repeat with other strap.

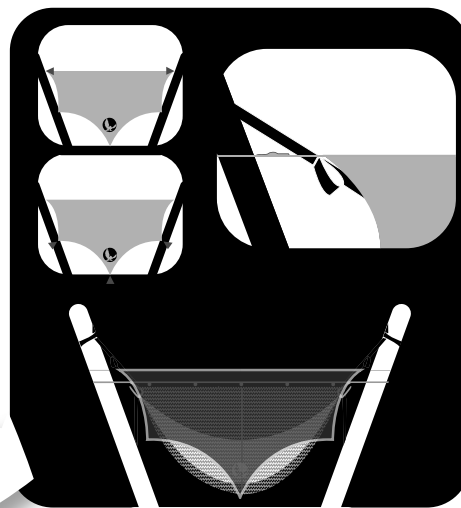

step 2: Hook up Hammock

Using the carabineers on the ends of your hammock, hook the hammock ends to the loops on the Slap Straps hanging off the trees. Take a minute to sit down in your hammock carefully to make sure it is secure and the Slap Straps are tight around your anchor object.

step 3: Hang Guardian Bug Net

Take the ridgeline cord and tie it to the same objects your hammock is tied, so it is strung above your hammock. Unclip one end of your hammock from the strap and slide the bugnet over the hammock like a sleeve, reattaching the hammock end to the strap when you can. Stretch your bugnet over the hammock to expand. Cinch bugnet ends tight around hammock ends. Using the five clips on the top of the bugnet, clip the top of the bugnet to the ridgeline.

step 4: Set Up Dry Fly

Drape tarp's ridgeline over bugnet ridgeline. Unclip one end of your hammock and pass Slap Strap down through webbing loop at tarp's ridgeline. Reattach hammock end. Tie tarp's ridgeline cords to trees (or anchor object), making sure your tarp is centered over your hammock.

Take the rest of the points of your tarp and either using the stakes provided or any close object, stake out and secure.

DO WHAT YOU WANT TO.™
